

Elaine Gray

Elaine Gray is a Principal Scientist at NIBSC, UK, with responsibilities for the control and standardisation of antithrombotics and therapeutics related to haemostasis. She is closely involved with production of reference materials for unfractionated and low molecular weight heparins and her laboratory is active in research and assay development of heparin related products for use as antithrombotics as well as other novel indications.

Barbara Mulloy

Barbara Mulloy worked for many years in the Laboratory for Molecular Structure at NIBSC, UK as a Principal Scientist. She has now retired and holds Visiting Professorships in the Glycosciences Laboratory at Imperial College London and in the Institute of Pharmaceutical Science at King's College London. Her research interests are in the field of structural glycobiology, specialising in the structures of glycosaminoglycans and other sulphated polysaccharides, and the interactions of these compounds with proteins involved in their biological activities.
